

MASCHIO GRSPARDO UNIGREEN

PRODUCT RANGE

Work well and the land will always pay you back!

Egidio & Giorgio Maschio

From the "casetta delle frese", where in 1964 the Maschio Gaspardo Group started, to more than 600,000 square meters of factories dislocated all over the world. This is the journey of a business which made agricultural mechanization not only a profession but mostly a passion with the only target to always stand by farmers all over the world. 2014 represents a decisive goal: 50 years of growth, decisions, and achievements perfectly represented in an ever growing product range.

The History

1964

The Maschio brothers, Egidio and Giorgio, based their business in the barn of their home where they begin to produce rotary tillers. From that point on the barn nicknamed "la casetta delle frese", becoming a symbol for the company.

1974

The company is officially born as Fratelli Maschio snc, industrial production of machines, equipment and accessories for soil working. A fundamental leap which contains the idea of vertical production, maintaining all processes within the factory to assure control and quality. One year later the company will begin to export abroad.

1978

The Maschio production features 8 types of rotary tillers, designed and manufactured by 50 employees. B, NC, CS, Z, HB-HM, R3 models, for tractors from 20 to 130 hp, define quality and performance guaranteeing success for all machines produced hereafter.

1979

Terranova opens, the logistic center of the Group situated in Cadoneghe (Padua); used for processing raw materials, today the plant is equipped with 5 automized laser cutter systems, 40 robot welding stations and 3 hot forging stations for blade production, and supplies all the plants of the Group.

1994

2003

The purchase of Gaspardo is officialized. The historic company located in Morsano al Tagliamento (Pordenone) founded in 1834 and known worldwide for the production of seed drills. In the 2000s, to reach far markets, the production of machines abroad begins. The high technologies used in Italy are the same used in every plant abroad guaranteeing the identical high quality standards.

Opening of the Maschio Gaspardo Romania production plant in Chisineu-Cris (Arad), used for the production of minimum tillage machines.

2004

Opening of the Maschio Gaspardo China production plant in Qingdao (Shandong), used for the production of small rotary tillers, mulchers and grass cutters.

2010

Miniferro is acquired, company from San Giorgio delle Pertiche (PD) specialized in sheet metal cold stamping, and today has become Unicka spa. With 35 presses from 50 to 5000 tons of power, Unicka also manufactures materials for international leading appliance and automotive companies.

2011

Opening of the Maschio Gaspardo India production plant in Aundh (PUNE) specialized in the production of rotary tillers and mulchers.

2012

Unigreen is acquired, company from Emilia-Romagna founded in the first half of the '80s specialized in weeding and spraying machines, like mounted or trailed sprayers and atomizers.

2013

Opening of the Portogruaro plant, Venice, specialized in the production of sprayers. Always in 2013 the production of a complete range of ploughs is a decisive step towards the most important objective: the full line.

The Group

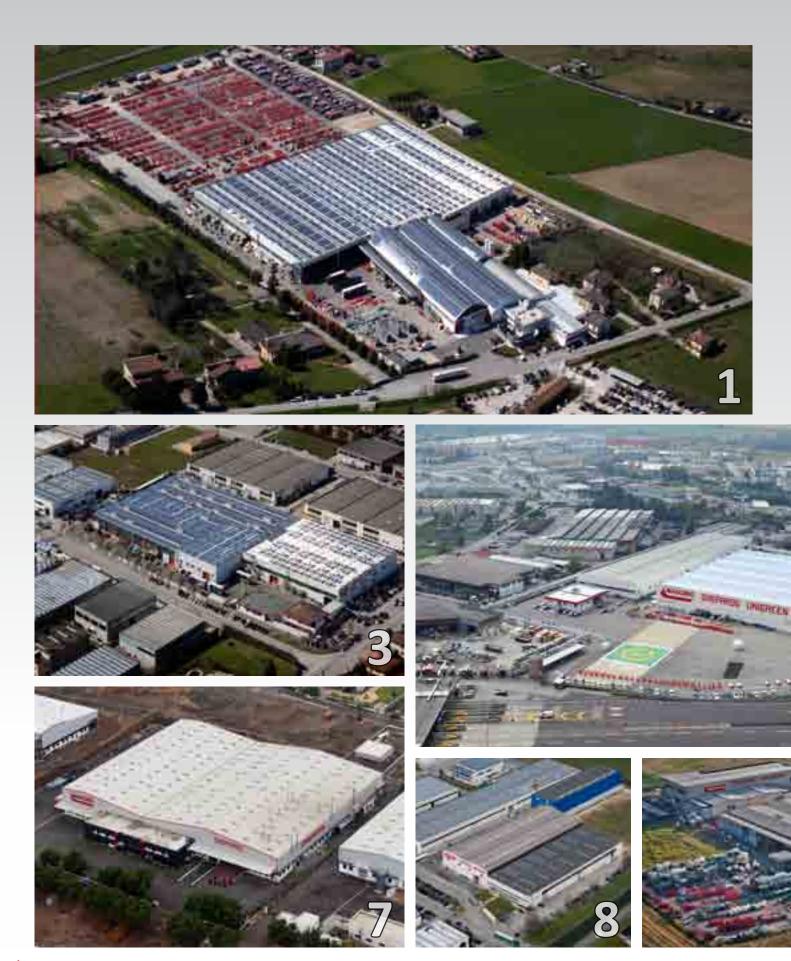

Maschio Gaspardo is present with 13 production sites in Italy, 3 abroad and 13 sales branches across Europe, Asia and USA for a total of 2000 resources committed in projecting, building, promoting and guaranteeing the machines built, following the principles that have always animated the company: grow with clients, work with dedication, passion and quality.

Web

www.maschionet.com

In an era of global multimedia, for an international company like Maschio Gaspardo having an interactive and constantly updated website becomes an essential tool for spreading information regarding products, events and updates.

This is why the website www.maschionet.com is updated daily, to inform clients which new products the Group has to offer. Online in 14 languages, the website contains institutional information regarding the history of the company and its presence in the world, but also a section for after sales service, used machines and merchandise.

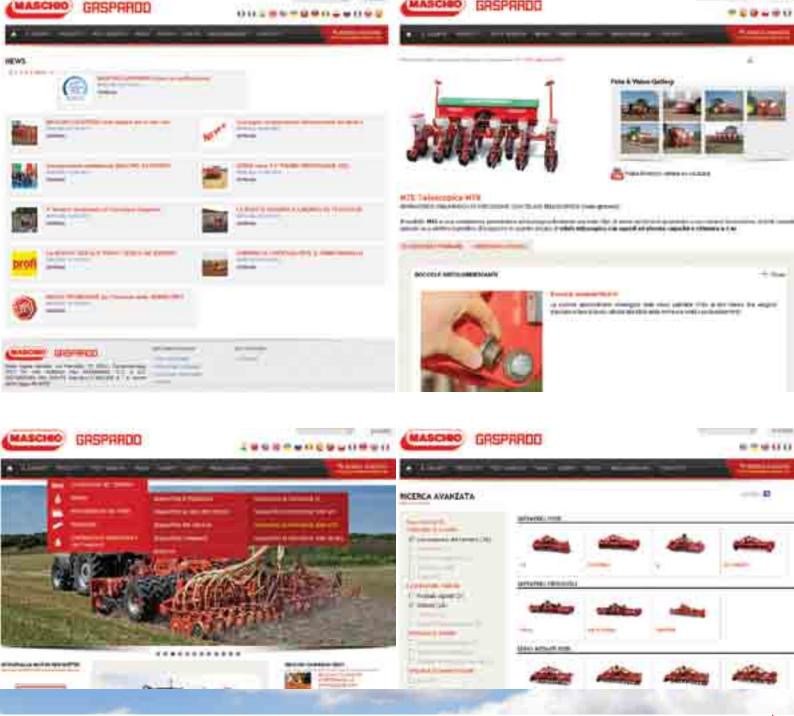

In the product section one can find details concerning all the machines produced by Maschio Gaspardo, with technical descriptions and the possibility to download related brochures; the news and events sections share all the events directly organized by the company, or events in which the company is a protagonist, to communicate technological innovations and new cultivating techniques.

Also fundamental is the newsletter, where it's possible to register directly from the homepage, and the contacts section, through which it is easy to ask questions about any product.

Sustainability + Carbon trust

The Maschio Gaspardo Environmental Policy

In 2010 Maschio Gaspardo gave way to a new eco-sustainable policy based on its products, by developing highly efficient machines, and on a production level, by installing autoproductive systems from renewable energy sources and energy saving systems. With the goal of reducing the associated CO2 all the energetic interventions done were carried out by local businesses based on the concept of "Zero Km". The investments concerned the accomplishment of 3,3 MWp of photovoltaic systems on the roofs of the Italian plants, plant insulation interventions and the introduction of monitoring systems and consumption reducing systems.

"Maschio Gaspardo finds the roots of its work in the earth, and projects its future towards the preservation of the Earth."

Mirco Maschio

To fully exploit the environmental and renewable resource investments, Maschio Gaspardo decided to open a study on Carbon Footprint (CF) at the Campodasego plant, a cognitive tool internationally recognized which permits to quantify total direct and indirect climate change GAS EMISSIONS produced. The analysis aims towards the identification of the "critical" aspects from an environmental point of view of production process, with the goal to define the ideal route for eco-innovation, to permanently reduce any type of harmful environmental impact and make the Maschio Gaspardo production completely green.

GASPARDO

We respect the environment when producing our machines, as a result, the CARBON TRUST honored us with a certification for significantly reducing CO2 emissions.

Always ready at your service

The spare parts service and technical assistance offered by Maschio Gaspardo Unigreen have always been a strength for maintaining a high level of client satisfaction and loyalty.

Assistance is guaranteed in every part of the world 24/7.

Every branch has numerous highly qualified technicians equipped with modern means and tools to reach even the farthest client. Moreover at the Campodarsego headquarters a fleet of technicians and vehicles are available including a modern helicopter ready to support dealers, importers, and when necessary branches as well.

For every product of the range, in every part of the world and at any time of the day or night, weekends and holidays, no client in possession of a Maschio Gaspardo Unigreen machine will be left alone, because the company provides the experience and highly prepared and qualified technicians, ready to solve any problem to permit clients to work at their best, quickly and with excellent results.

The same attention is given to the spare parts service. Orders are received through the @work network, an online platform which allows retailers to easily order spare parts, enabling immediate order reception and record fast delivery, even in 24 hrs in certain emergencies; furthermore, the use of automated warehouses allows to prepare orders practically in real time. The Maschio Gaspardo Unigreen blades also deserve a particular note: utensils perfectly manufactured and homologated, produced from within the Group's plants with strict and technologically advanced hot forged processes which guarantee optimal working performance, as well as a constant and fast warehouse supply top up, considerably lowering refilling times.

Client satisfaction is the final target which Maschio Gaspardo Unigreen has always pointed at.

"Costumer service is our strength."

Martina Maschio

RDO UNIGREEN

Sprayers

Gaspardo presents its new range of mist blowers and sprayers: trailed and mounted versions, huge options of fans with innovative solutions for a uniform spraying and effective treatments. Enter the world of crop protection from the front door: choose a Gaspardo!

Mounted sprayers

PRE-MIXER

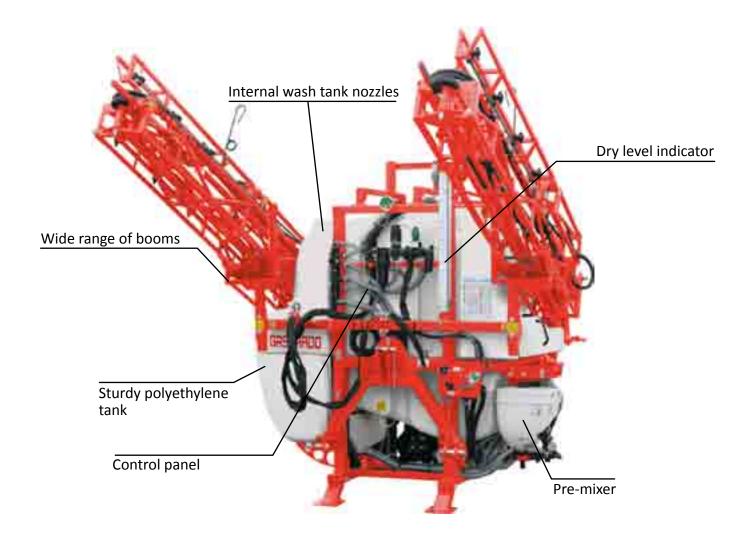

The Pre-mixer reduces contact with hazardous chemicals during preliminary operations, and begins product dilution with flow from the main tank. The bottle-cleaner nozzle allows 100% of the product to be used, reducing the waste in empty bottles.

FOAM ROW MARKER

The foam row marker is a valid alternative when a GPS system is absent to define the width of the worked pass. A device releases the foam at the edge of the boom to minimize overlapping and untreated areas, and better sustain every treatment!

Chosen by professionals

SATURNO

Saturno is for the professional sprayer who needs to cover large land surfaces in a short amount of time: the rich features of the machine allow easy preliminary operations and cleaning at the end. Solutions like the control panel on the drive side with all control valves reduce downtime; the PRE-MIXER feature improves comfort and operator safety for an everyday use with maximum productivity.

Trailed sprayers

GENIUS WAVE

It allows a very fast treatment setting and a constant adaptation of product distribution based on the speed of the tractor. All operations are easier, and it's possible to concentrate more on driving, not having to pay attention to maintaining a constant speed.

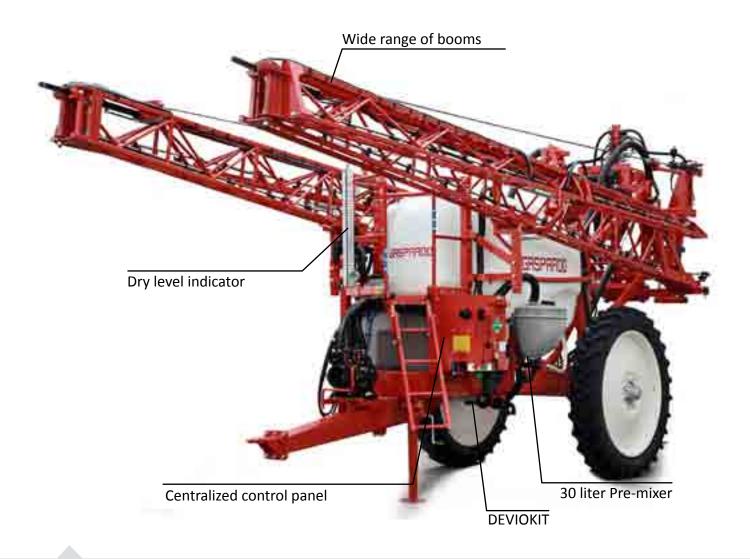

ADJUSTABLE TRACK WIDTH

The track width is adjustable on all models to fit with the tractor width or crop inter-row. The telescopic system of square axle and pin locking make this operation quick and easy.

Versatile

POMPEO

Pompeo was designed with many configurations to satisfy every need. Its main strength is the powerful parallelogram lifter with 1500 mm of range, dampened by a nitrogen accumulator system. With this configuration, it is possible to match the machine to wider booms in the range, up to 36 m.

Mounted mist blowers

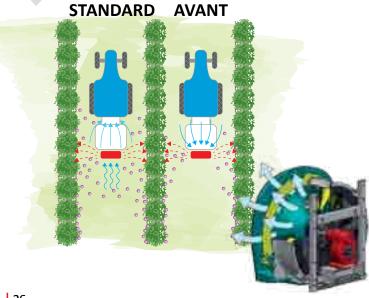

AVANT SYSTEM

Front suction avoids any projection of sprayed particles towards the same sprayer, the tractor and the driver. High performance in distribution uniformity is obtained from the fixed counterblades and bi-flux deflector that optimizes air speed exit: this improves product penetration through tree leaves.

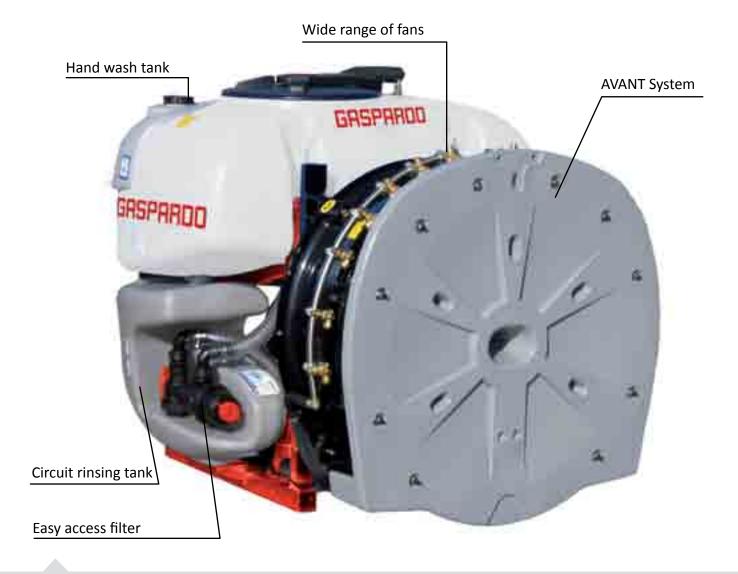

MAINTENANCE

Valves and filters are in an easy access position: regular maintenance after every use improves treatment quality and extends equipment life.

Powerful

APOLLO

Apollo is a mounted mist blower, light and simple with peerless manoeuvrability. It can be combined to all the fan units and features a very wide range of configurations. It's available with a manual or electric control unit, a filling hose and upper spray deflectors. The compact design and the tank, up to 600 litres (1000 for gun version), makes it the perfect ally for the vine or fruit grower that needs a quick response against plant diseases with an easy-to-use machine.

REAR GROUPS

Gaspardo offers a wide range of rear groups to satisfy every spraying needs in vineyards or orchards.

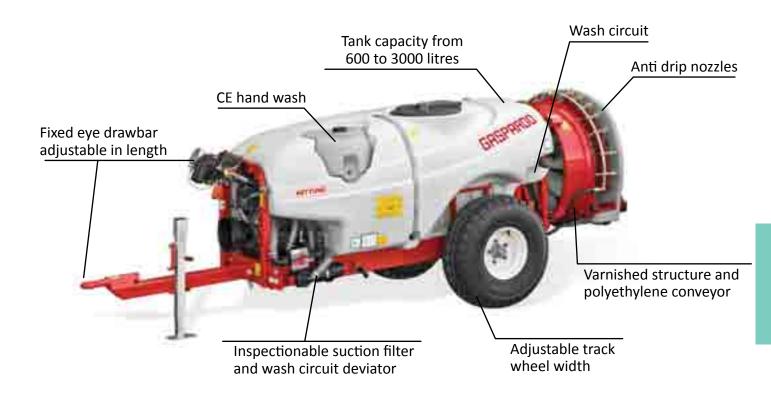

PRESSURE

Electric pressure regulator with delivery filter.

Universal solution

NETTUNO

Nettuno is the basic Gaspardo trailed mist blowers: cheap and easy, the main strength of Nettuno is the great spraying autonomy (up to 2000 litres). It is available with a manual or electric controller and can be matched to rear or "Avant" fans. Track width, on this and on all other trailed machines, can be adjusted with a telescopic system on the axle.

Self propelled sprayers

MOTOR

Uragano is powered by a strong and reliable 6068T John Deere 6- cylinder engine: total available power is 170 hp (127 kW) to run all the services and the hydrostatic traction. 150 liter diesel tank ensures a great autonomy.

CAB

Uragano is electronically managed: drivers can access all main functions from their seat!

360° protection

URAGANO

Uragano is a self-propelled sprayer specifically developed to work on high crops (taller than 2,00 m). The original arch design of the frame allows the driver to overcome high plants (maize, sorghum, sugarcane, tobacco, etc) with no damages at all. Compact design and a very advanced hydraulic circuit makes the machine reliable, handy and safe on field and during spray set up.

Mounted ploughs

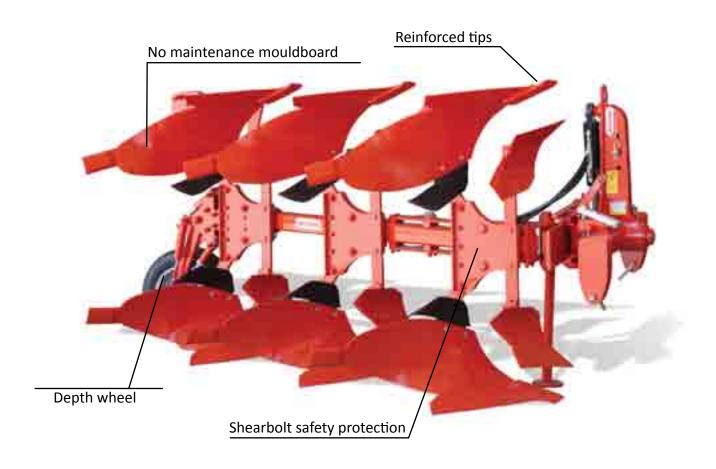

INTER-BODY & UNDERBEAM CLEARANCE

The large space between bodies and underbeam clearance allows to manage great volums of residue even with narrow working widths and easily apply different types of coulters and ploughshares.

DAMPENED DEPTH WHEEL

Hydraulic damping with an adjustable synchronisation cylinder which ensures constant working depth and that the wheels turn gently.

LELIO

The special frame is characterized by a large section (up to 180 mm), inter-body space (up to 120 cm) and underbeam clearances (up to 100 cm) which make these models the right choice for the toughest ploughings. LELIO and LELIO VARIO models are fitted respectively with the "by step" and "vario" furrow working width adjustment system. Both versions are characterized by the shearbolt safety device and are available in 5 sizes (S, M, L, XL and XXL). The number of bodies available varies from 2 to 5+1 and the hp required from 60 to 230.

Trailed ploughs

NO WELDING

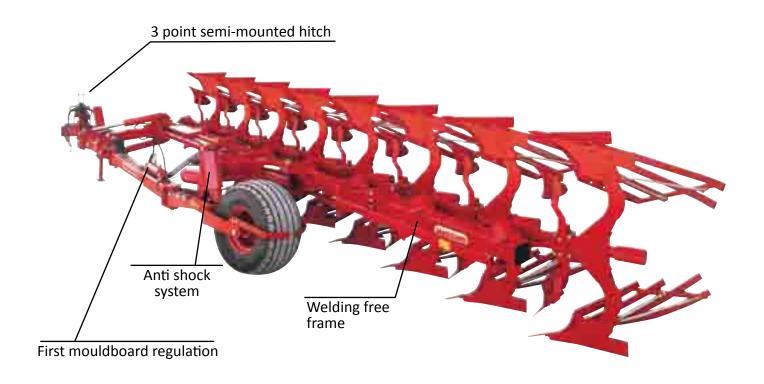

All supports and plates are bolted onto the frame. The absence of welded points guarantees great resistance, reliability and stability even under heavy stress.

STURDY FRAME

All adjustment brackets and plates are externally bolted on the main frame. The lack of welding points ensures great strength, reliability and high stability even under heavy load conditions.

Great maneuverability

NON-STOP

These semi-mounted ploughs are available with a number of furrows from 5 to 6+2. The Auto Reset hydraulic system protects the bodies and frame from damages. Hydraulic working width adjustment system (MIRCO NON STOP) or the manual one (MIRCO NON STOP PASSO) allow working widths for each body from 30 to 50 cm. The great inter-body space (100 cm) and underbeam clearance (72 to 90 cm) allow to manage high quantity of residues granting high quality ploughing. The first furrow width as well as the working depth are adjustable hydraulically.

Folding ploughs

IT FOLDS BUT IT DOESN'T BREAK!

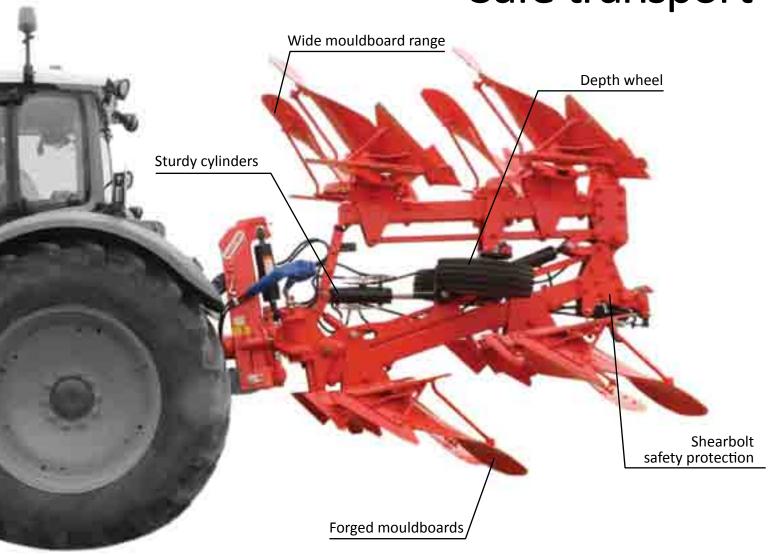

Pietro folding ploughs can be equipped with an innovative folding frame. Two robust cylinders block and close the central beam upward reducing the length in half. This system benefits road transport and moves the plough center of gravity towards the front, reducing stress on the three point hitch and rear tractor axle.

MINIMUM WEAR

The bodies are fixed to the frame by 5 hole plates externally bolted. The articulation points of the regulation brackets consist of a robust 20-24 mm bolt and two tempered bushings.

Safe transport

FOLDING

Maschio offers a brand new range of folding mounted ploughs with both "by pass" or "vario" working width adjustment systems. The folding point placed after the second or the third body makes it easier and safer for road transport and sets the center of gravity forward reducing stress on the rear tractor axle. All models are available with a shearbolt safety system or a hydro-pneumatic system and with a number of furrows from 3 to 5+1.

Н

U

В

С

SC SC COBRA G PUMA PANTERA AZ DIANA

Fixed rotary tillers

GNL SEAL

Rotary tillers (H, SILVA, DIANA, U, B, C, SC, G, PUMA and PANTERA) are equipped with "duo cone" amphibious mechanical sealing system. The machines can thus work in every condition (mud, dust or submerged) guaranteeing high performance and lasting reliability.

DEPTH: UNDER CONTROL!

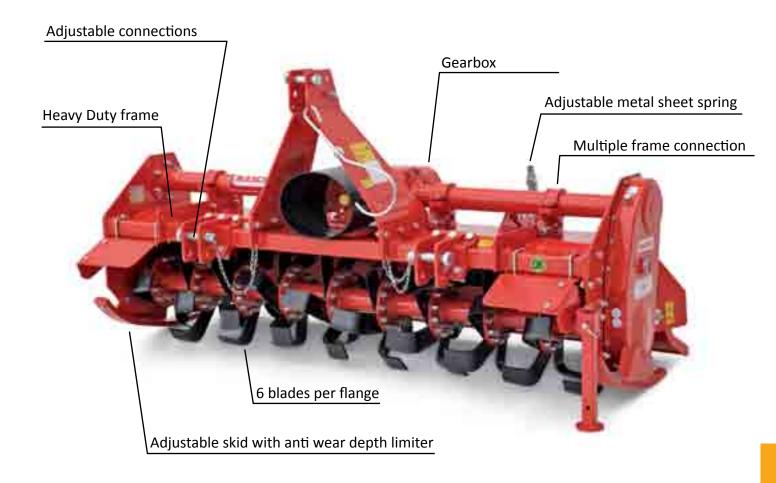

The Maschio rotary tillers are all supplied with multiple depth adjustment skids. This system ensures a precise regulation of working depth.

Suited for every ground

Н

This model is particularly sturdy because its construction and accessories are typical of larger models, and adapts well to different types of soil. On request it can be supplied with a multi speed gearbox; gear side transmission and "duo cone" waterproof sealing are standard features!

Fixed rotary tillers Up to 250 hp

MADE IN MASCHIO

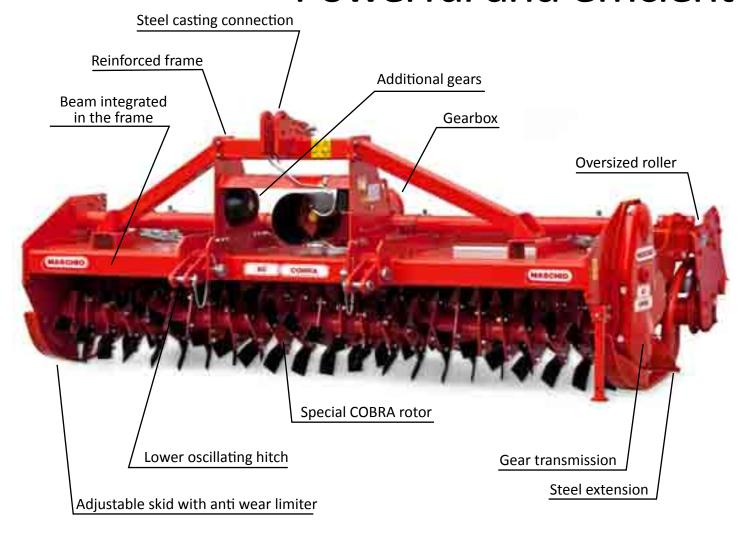

All the most important components (frames, gearboxes, transmissions, rotors, blades...) are designed and produced directly by Maschio in its production plants. This means high and certified quality standards.

LEVELLING

The double-effect rod allows to set soil cultivation precisely. It is possible to regulate levelling and the pressure on the ground exerted by the bonnet. The upper spring functions as a shock absorber and buffer during transportation.

Powerful and efficient

SC COBRA

This tiller has been designed for professional use and heavy duty applications. With the new mechanical structure and the wide range of accessories it is possible to have high performances on any type of soil. Available in versions with Cobra and Condor rotors for better adaptation to different types of soil and a well-tilled seedbed.

Folding tillers

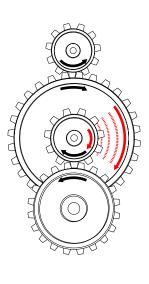

RELIABLE TRANSMISSION

The special epicyclic lateral drive with 4 gears matches excellent reliability and strength in a compact design. The stainless steel carter contains lubricating oil and has a structural function for the transmission.

PERFECT LEVELLING

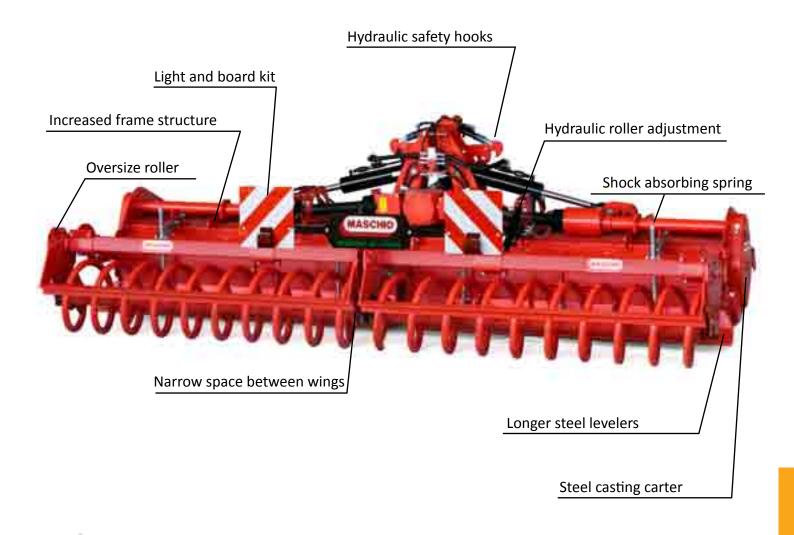

The levelling bar and roller are oversized in order to the level and refine the seed bed. These solutions ensure perfect and uniform soil levelling.

Compact design

PUMA

Folding rotary tiller suggested for medium-large farmers and contractors. It ensures high level of soil crumbling and good time performances. Thanks to a narrow transport width and a compact structure, PUMA can be easily moved. Its moderate weight allows the combination with medium power tractors.

Power harrows

Maschio power harrows: a manufacturing approach based on 4 rotors every 3 feet which guarantees excellent soil preparation and reduces tractor power consumption. The double casing and the well-spaced bearing-toothed wheelbearing structure, form the skeleton of a robust and resistant body able to withstand shocks and twisting.

STONE DEFLECTORS

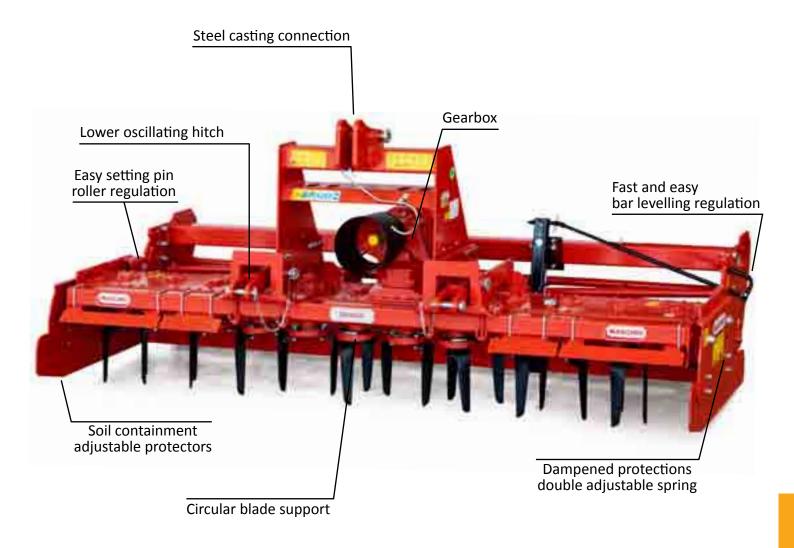

The PLUS stone deflectors protect the transmission from stones and ensure better soil refining. This guard is standard for quick release models.

BLADES GUARANTEED FOR LIFE

The blades are guaranteed for life thanks to the automatized and certified production system. Efficient soil preparation, reduced tractor power consumption and long life are the main features of these important components.

The best rotation

DRAGO

Strength, moderate weight, wide range of accessories and the combination with other models makes this machine the best choice for coupling with medium power tractors. High quality double casing and gearbox make this model even more reliable.

Fixed power harrows

QUICK (RAPIDO SYSTEM)

The patented quick blade release system allows to replace blades in a few seconds. The blades are fixed with a tempered pin which assures reliability in every work condition.

DOUBLE CASING

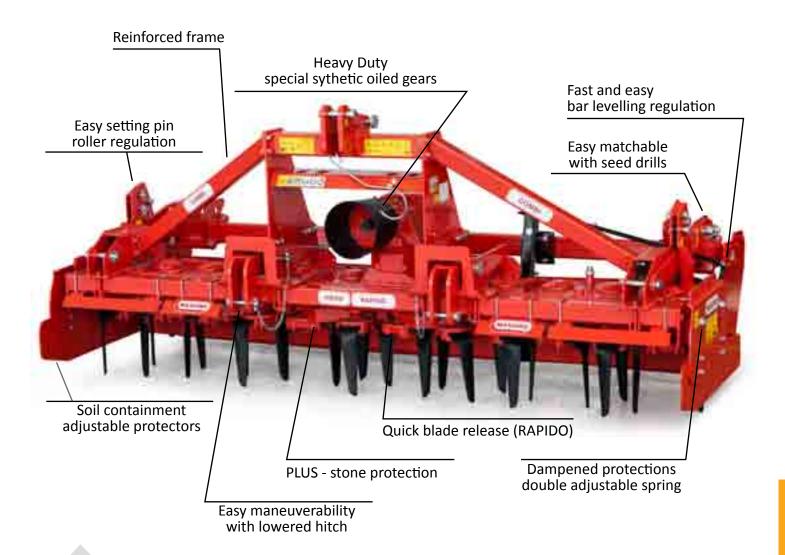

The double casing high strength steel structure (6 mm + 5 mm) guarantees the high reliability of all mechanical components. The external layer protects the machine from stones and prevents possible damages.

Unstoppable

ORSO

With this model Maschio introduces the new swiveling roller bearings for harrows. Compared to roller and tapered bearings, these ensure higher resistance. Used for continuos heavy duty work, typical for subcontracting and tenacious grounds. The mechanical strength is proven by severe tests done inside stone quarries.

Folding power harrows

PERFECT LEVELLING

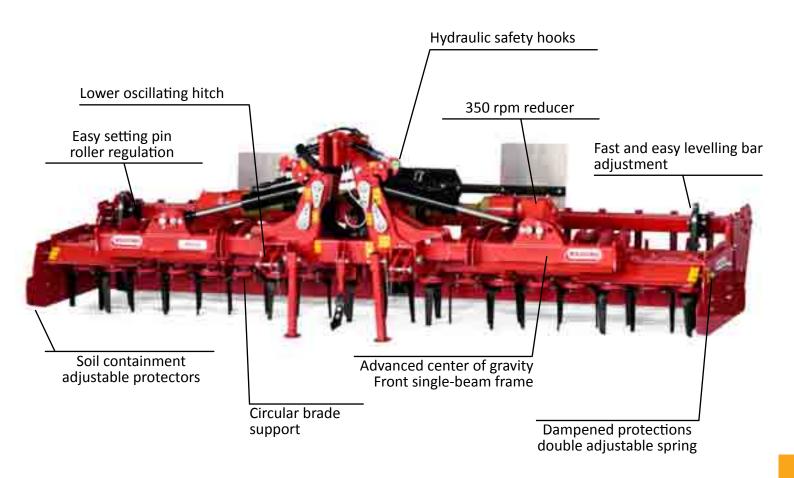

The levelling bar installed on the roller can be easily adjusted and does not need further settings when depth varies. The mechanical adjustment is fast, precise and safe for the operator.

SINGLE BEAM FRAME

The front single beam frame is made of high resistant and elastic materials. The folding system is hydraulically controlled and the frame helps to prepare the soil thanks to a floating system which uniforms depth also on nonleveled terrain.

It folds but doesn't break

FALCO

This power harrow is indicated for medium-large farmers. Reliable, strong with moderate weight, it is compatible with tractors from 110 to 200 hp. This model is combinable with the GASPARDO pneumatic seed drill CENTAURO.

Folding power harrows

BEARINGS

The swiveling bearings ensure high resistance during heavy duty operations. The floating system gives flexibility to the transmission shaft, which becomes more resistant to impacts, typical on stony soils.

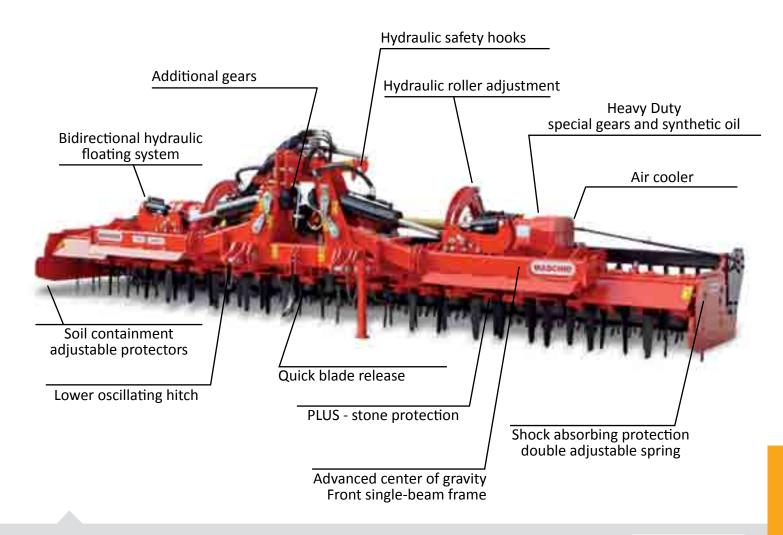

DOUBLE CLUTCH

The cam clutch system, placed on side gearboxes, ensures efficient transmission protection. The quick fastening protection and the low maintenance PTO shafts allow to limit ordinary maintenance costs.

Many features

TORO

This is the newest MASCHIO folding power harrow, designed for heavy duty applications and for tractors with power up to 380 hp. TORO is equipped with the new swiveling roller bearings and is suitable for continuous works even on most hard and stony soils. Low maintenance and high performances are always guaranteed. This machine is the best choice to meet the requirements of large contractors and farmers.

Pull-type cultivators

The seedbed preparation is fast and efficient with MASCHIO subsoilers. They match deep hard pan breaking and soil levelling. Solidity and attention to the details are the essential features of these equipments.

ATTILA

ARTIGLIO MAGNUM

DIABLO

TERREMOTO 3

DRACULA

GRANCHIO

Fixed subsoilers

HYDRAULIC NON STOP

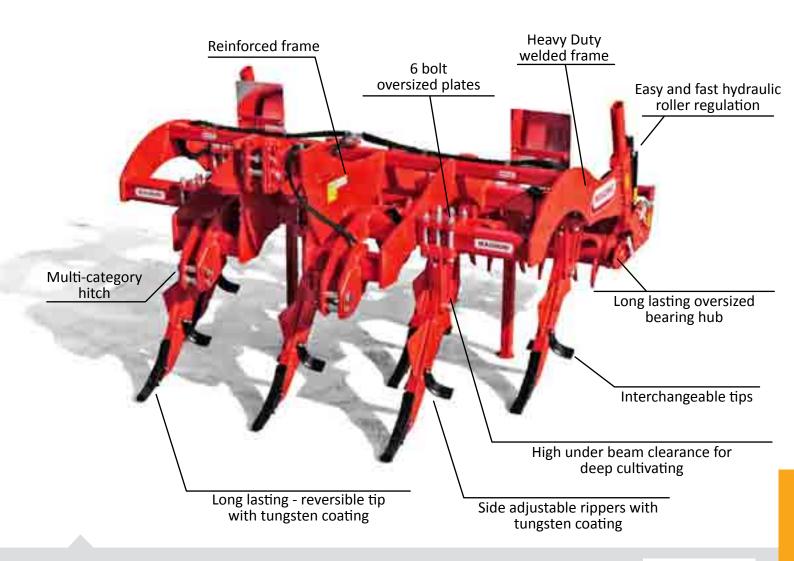

Thanks to the safety system with a nitrogen accumulator the tine can overcome obstacles without damages. With the automatic reset the working position is restored as soon as the stone has been overcome.

LEVELLING AND REFINING

The double spike rear roller ensures soil levelling and clods breaking. The special counter-rotation of the rollers is generated without additional energy. The spikes are produced by a forging process, which makes them long-lasting and though.

Disruptive

ARTIGLIO MAGNUM

The ARTIGLIO MAGNUM model can work at adjustable depths (from 25 to 70 cm). The long tines allow deep breaking up by maintaining high ground clearance, which prevents soil and residues clog formations. Thanks to the Heavy Duty frame the machine can be used in combination with high power tractors.

Folding subsoilers

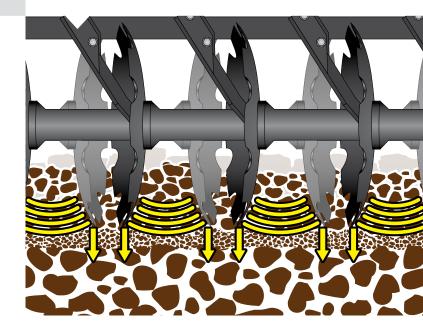

LONG-LASTING

Front tip, 3" large, shatters compact soil layers and improves shank penetration. It can be easily upset just removing two bolts when one side is wore out. The tungsten coating makes it even more lasting.

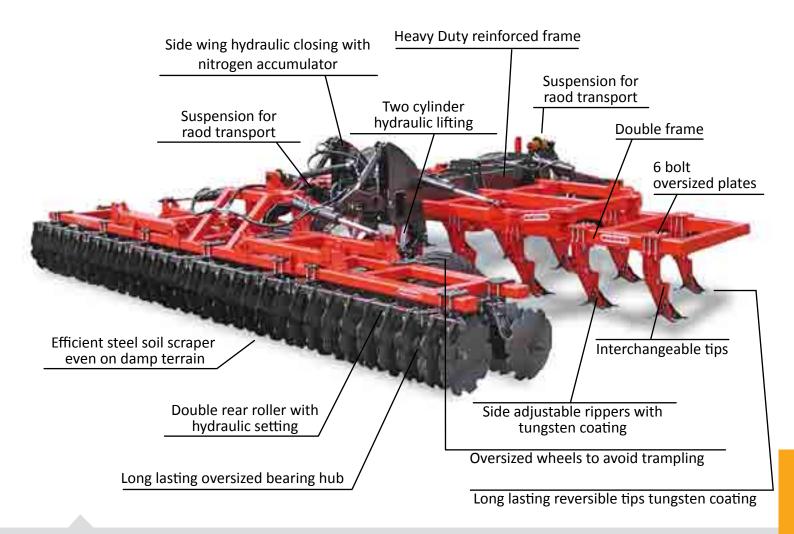

RECONSOLIDATES THE SOIL

The disc harrow, which controls depth, offers much more: consolidates the soil without surface compacting, clod breaking, seedbed levelling, residue incorporation. These actions allow to restore soil porosity improving capillary water flow and radical plantlet development.

All-in-one

DIABLO

DIABLO frame is extremely sturdy! The folding version is equipped with 6 cylinders, 3 per side, that ensure a constant working depth preventing frame oscillations, torsions and then damages. The ground clearance is 35" while the gangs are 49" spaced.

Tines cultivators

EASY SETTING

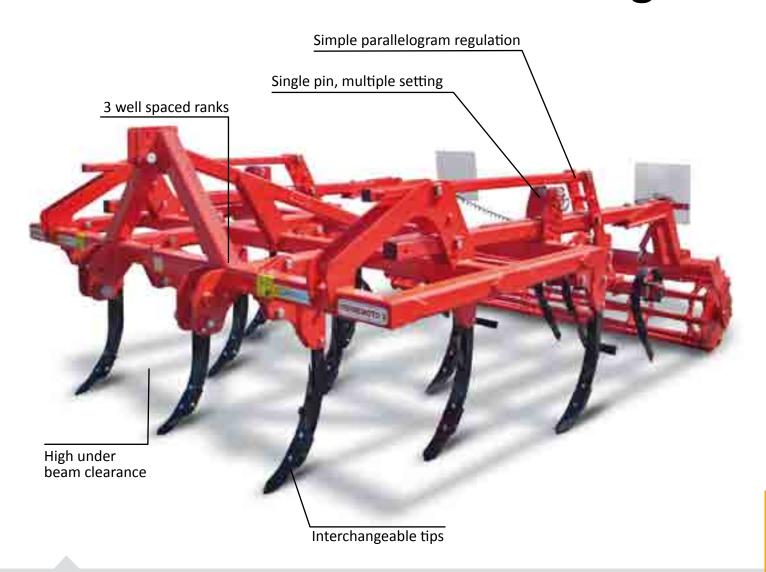

The working depth adjustment is easy and fast. Roller and levelling bar are linked by a parallelogram and the depth adjustment is set by a pin system.

RESIDUE MIXING

Thanks to tines and tips with a curved profile it is possible to cultivate the whole working width by mixing residues and straw. The 3 well-spaced rows and the high ground clearance ensure fast working speeds even in the presence of large quantities of residue.

Big bite

TERREMOTO

The TERREMOTO cultivator is extremely versatile, thanks to its different tine and roller configurations it can fit with different soils and working conditions.

Disc cultivators

CULTI HUB

The culti hub is an oversized solution that guarantees the maximum reliability and durability working on every soil condition. Thanks to the heavy duty dual roll bearing it can bare shocks and high load tipycal of hard and rocky soil conditions. The long life comes from the perfect oil lubrication. The dual cone sealing system allows use of oil and makes the hub totally water and dust proof, maintenance free and long lasting.

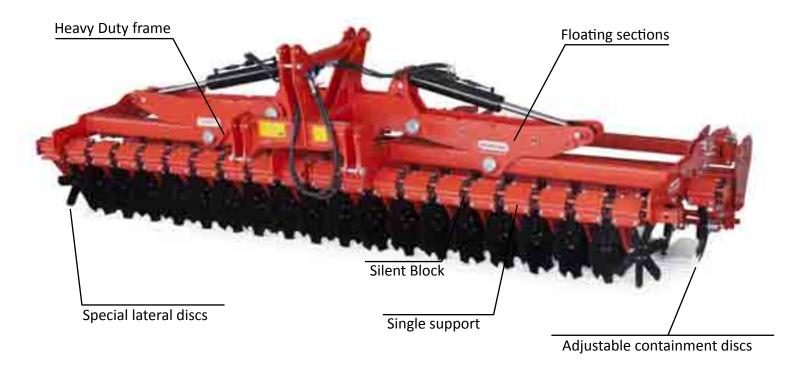

LARGE DIAMETER NOTCHED DICS

Discs with a curved profile allow to incorporate any type of residue thus cultivating the entire work width. High ground clearance can make the machine work well even at high speeds and when abundant residue is present.

Intense

PRESTO FOLDING

Available in trailed or mounted versions. The frame folds and floats thanks to the robust central hinges. The structure with independent sections can follow perfectly every soil profile.

HEAVY DUTY SHANK

The Heavy Duty shank, made of tempered boron steel, breaks up and refines soil up to 10" depth. Rear distributor delivers fertilizer into furrow.

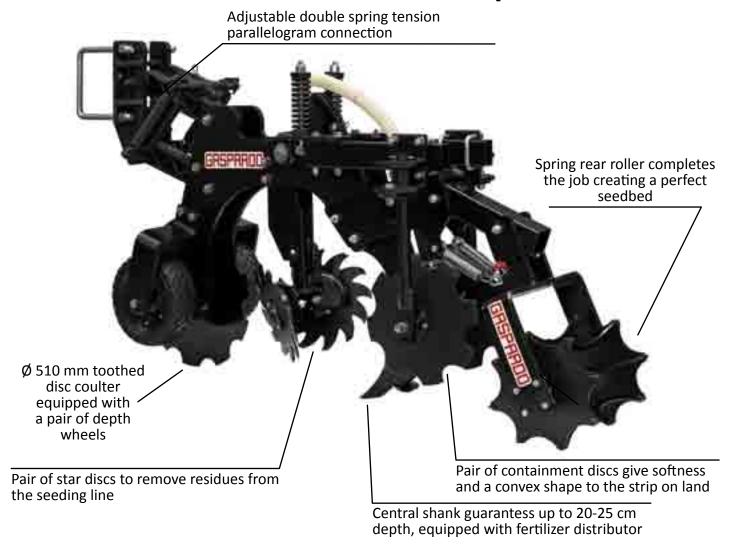

LOCALIZED FERTILIZATION

Localized fertilizer gives a significant benefit in terms of results and yields. On-strip distribution reduces rate of fertilizer applicated, minimizing wastes. The precise and proven GASPARDO system allows to deliver the proper quantity of granular fertilizer into the tillage strips. Under-row localized distribution can be obtained only with this kind of machineries, and takes much more agronomic benefits than traditional side-row distribution. In first growth stages plants rooting depth is stimulated, making crop more resistant to water stresses!

Strip cultivator

ZEBRA

Zebra is a strip cultivator which works only a thin strip of land where seeding will take place during the subsequent planting phases. The inter-row space is left untouched and the residues from the worked rows are pucsed towards the unworked rows. At the same time fertilizer can be placed at the bottom of the furrow.

Precision planting & crop care

Since 1834 Gaspardo designs and manufactures agricultural equipment and follows just one goal: satisfy customer's requests from all over the world. Seeding technology has evolved in a way that it has affected traditional farming, creating machines that can sow without tillage, or reducing it to a minimum; the number of rows used has increased according to risen tractor power. The Company is able to produce machines up to 48 rows to meet the requirements of the biggest farmer.

For Gaspardo, innovation is always a key factor.

Mounted fixed frame

SUPER SEAL

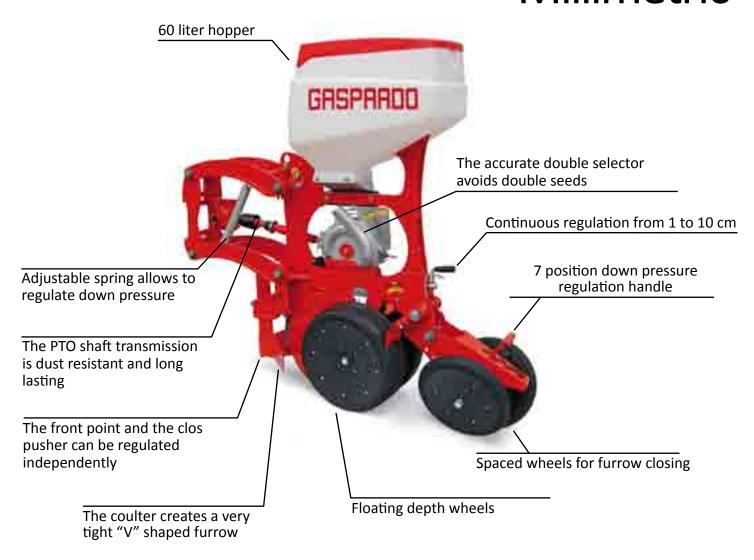

The double row ball bearings are oversized and guarantee reliability in the most demanding working conditions including rocky soil. Long life is guaranteed by triple seal protection. The hub is dust proof which makes it ideal to work in wet conditions as well.

DOUBLE SINGULATION

Singulation is carried out on both sides of the seeding plate holes avoiding seed doubles regardless of inconsistency in shape and size. Singulator adjustment allows delivery with high accuracy even using different hybrids of seeds without seed plate replacement.

Millimetric

MTR

The MTR planting unit is the evolution of the MT model which has represented for years precision planting excellence. The MTR infact maintains the same philosophy but with superior operative capabilities thanks to the biggest opener discs in its class, the new multi-set furrow closing device guaranteeing perfect seed covering even in the most challenging conditions; also, the parallelogram is more robust to assure greater stability when working at high speeds.

Trailed fixed frame

PTO SHAFT TRANSMISSION

Forget chains, lubrication and dust wear. No fear while working on high residues, corn stalks can't damage it. The PTO shaft drive guarantees an even seed plate rotation with no maintenance needed. Maximum reliability with user friendly operation!

PRESSURE SYSTEM

Double spring planting unit pressure system with graduated scaling and safety locking device. Adjustable pressure from $170\,\mathrm{kg}$ to $300\,\mathrm{kg}$.

Strong pressure

REGINA PLANTING UNIT

The Regina model, suitable for direct planting, has a front convex disc for furrow opening, double disc coulter, and a pair of rear press wheels. The central part of the planting unit is built in one piece for major resistance to ground impact (+50%) and side stress (+25%). The model is indicated to manage residues along the seeding line, maintain a consistant seed depth and have good soil-seed contact.

Mounted folding frame

ARM STRONG

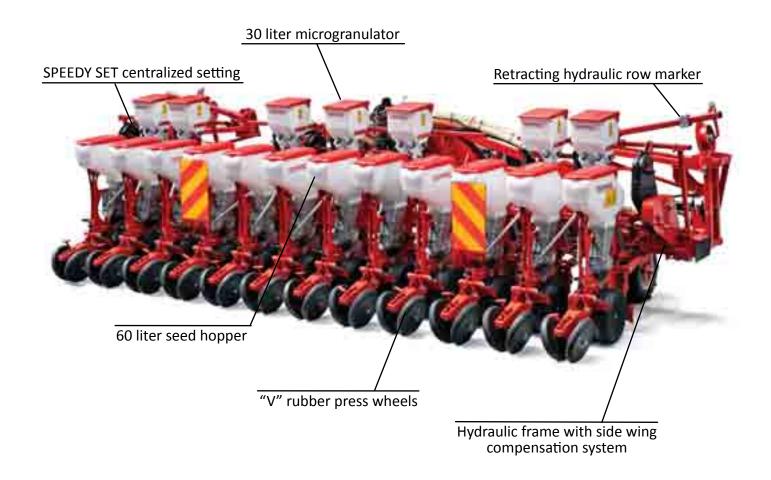

The parallel linkage arm is made of one high tensile steel cast piece. This design prevents from twisting and bending under heavy loads and impacts which can occur in the toughest working conditions.

BUSHINGS

Self-lubricating sintered bushes release oil particles that lubricate the hinge.

Relentless

MANTA

MANTA was developed to satisfy the requirements of large farmers and contractors. Equipped with a hydraulic folding frame and telescopic sections, MANTA allows sowing in 12 rows with only 10' of transport width. The high productivity and reduced maintenance makes it the perfect equipment for the seeding professionals.

Trailed folding frame

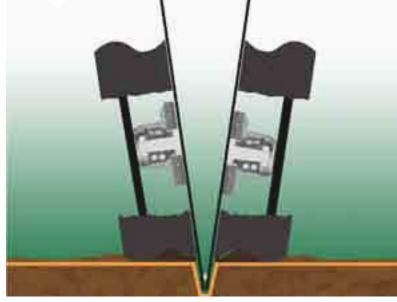

MONITOR SERIO

Standard on Metro and Maximetro models, this monitor is equipped with many functions which help farmers during planting: partial and total worked area, planting density, average planting distance.

DEPTH GAUGE WHEELS

Gauge wheels consolidate soil immediately after furrow opening. Most down pressure is given to the side while the soil closer to the furrow is just gently firmed before the rear closing wheels.

Heavy duty

RENATA

Perfect seeding is guaranteed even in the most demanding conditions thanks to the heavy duty parallelogram linkage arms, the largest opening discs (42 cm diameter), and the multiple adjustment furrow closing device. In zero till conditions, seeding depth is consistent even with high crop residues, thanks to the furrow opener and the trash wheels. The vacuum system and the special adjustable selector ensure accuracy even with seeds having an uneven shape or size.

Telescopic frame

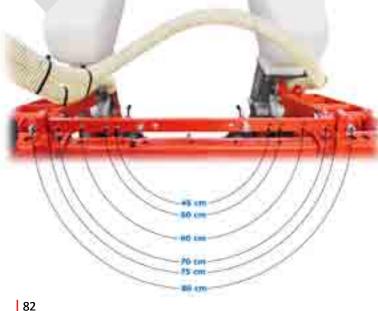

ADJUSTABLE INTER-ROW SPACING

The MAGICA and MONICA models allow a quick inter-row changing. They are equipped with a foldable and telescopic frame up to 9 rows with variable inter-row spacing. Available with high capacity hopper.

BEST COMFORT BY GEARBOX WITH HAND **LEVERS**

The smart double-lever selector makes possible to set seed population in just two moves! Thanks to its side position, user can select one from the 16 reduction ratios in the best comfort and absence of dust or grease.

Open/close frame mechanical safety

MAGICA

The MAGICA model allows a quick inter-row changing. It is equipped with a foldable and telescopic frame up to 9 rows with variable inter-row spacing. Available with a large capacity hopper. The MT unit is the ideal answer to problems of modern agriculture in which maximum efficiency must be combined with minimum cost. Among the special technical characteristics of the MT are the roller components, which offer excellent performance in every ground condition: tilled (traditional seeding), minimum tillage, or with residues from previous crops.

Sugar beet row-crop cultivators

SPRING ELEMENT WITH SIDE PROTECTIONS

It's the most common solution: it adapts to every terrain as long as it is stone free. The floating side protections allow to work on crops at their first vegetative stages preventing dangerous soil spills on the worked area.

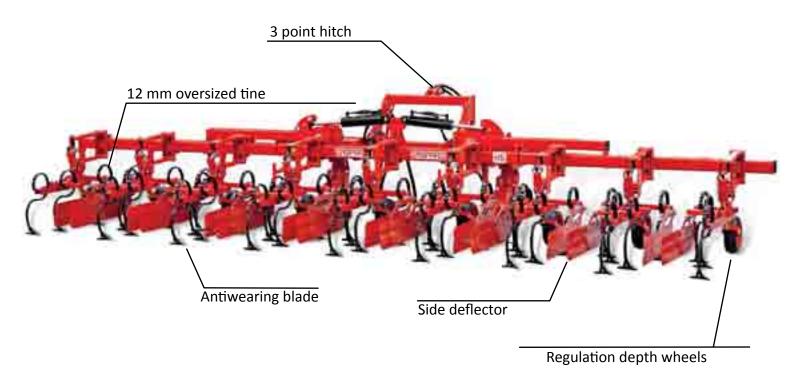

ROW SHUT OFF

Frame with external row shut off for added comfort (optional).

Easily adaptable

HS

The folding frame can easily be transported on road meanwhile the large hopper allow the use of big bags and guarantees high autonomy. The element with 5 shanks installed on 4 well spaced gangs ensure high working precision without cloggings.

Maize row-crop cultivators

VOLUMETRIC DISTRIBUTOR

The MINIMAX volumetric distributor is easily adjustable and is able to spread fertilizer at different doses maintaining a very precise and constant distribution (50-700 kg/ha). SPEEDY SET is the centralized regulation of the distributors: fast, precise and comfortable.

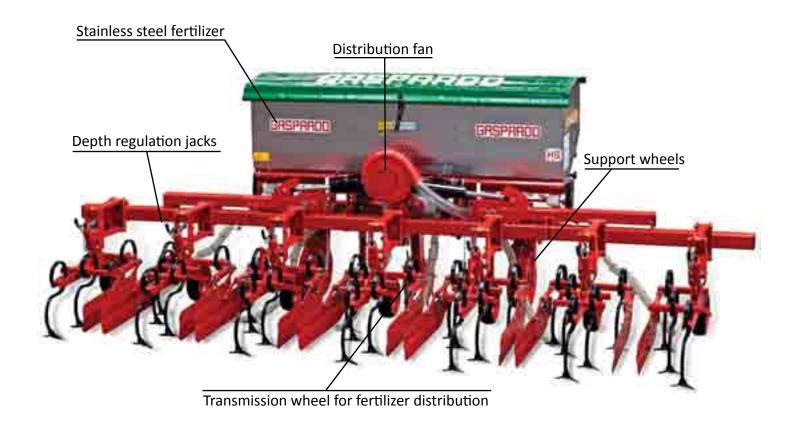

FERTILIZER DISTRIBUTION

Uniform distribution of fertilizer by gravity on the central rows, pneumatic on the external rows.

High capabilities

HS

The HS model is the professional row-crop cultivator that features high autonomy, thanks to the big hopper (also available in stainless steel), and a reduced road clearance (2,5 m). The pneumatic delivery of the fertilizer on the side rows assures an even distribution. The hydraulic closing of the wings guarantees maximum comfort for the operator.

Vegetable planters

The vegetable vacuum planters are the result of the experience GASPARDO has gained in precision planting. Structural functionality and component modularity make these machines optimal for the modern horticulture.

TELESCOPIC

RIGID

FOLDING

ORIETTA

OLIMPIA

Vegetables

SEED DISTRIBUTOR

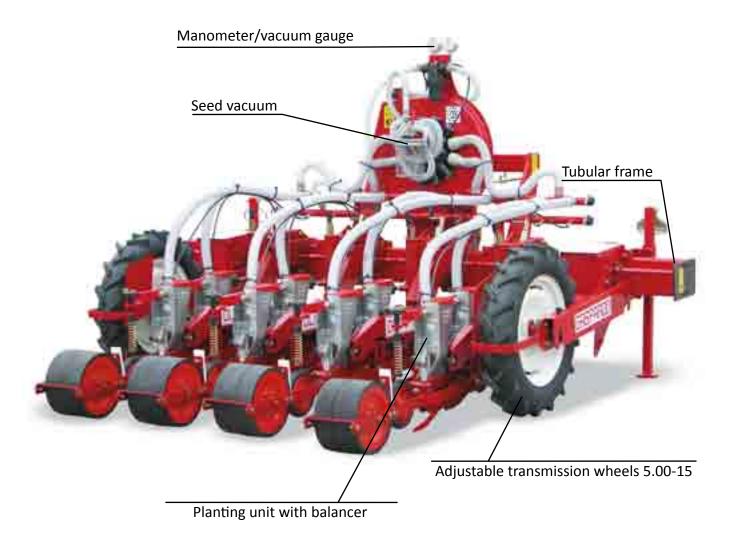

The distributor, made in cast aluminium and particular antiwear plastic materials, guarantees high sowing precision thanks to the particular design of the components. Cleaning and maintenance are easier thanks to the comfortable distributor opening with ergonomic knobs.

TRANSMISSION

The 36 ratio gearbox transmission is easy to access and set. The different configurations make it possible to deposit seeds at a distance that can be adjusted between 0,42 cm and 55 cm.

Double capacity

OLIMPIA

The version with a double distribution unit, called OLIMPIA, has been developed to offer maximum precision for twin row seeding. Many accessories help to adapt the planter according to soil conditions and crops. The stainless steel or rubber seed-press wheel is improve seed-soil contact. The distance between the two distributors can be adjusted from 2" to 4".

Cereal drills

Gaspardo offers a complete range of cereal seeders, developed directly to meet farmers needs. The wide range of units allow to sow in every conditions, well prepared soil or minimum tillage conditions.

Mechanical drills

CONSTANT DEPTH

The exclusive Gaspardo depth control system guarantees a uniform crop emergence on any soils. The different depth limiter diameters determines different sowing depths. The limiters are also available in different materials: cast iron for more down pressure or sheet metal for less down pressure.

RATE SETTING

Continuous 3 cam gearbox setting for constant driving transmission. Shafts are less subject to wear thanks to the use of ball bearings. Cams are in an oil bath with inspection window. Quick and precise calibration and high precision regardless of calibration settings.

Gravity enthusiast

Planting unit depth gauge wheels with cast iron conic profile

DIRETTA

The DIRETTA model is ideal for direct seeding and for sowing on minimum tillage conditions. It is a mechanical drill suitable for all types of seeds: cereals, soybean, rape, grass etc. On request, the DIRETTA CORSA version can distribute both seeds and fertilizer: the hopper can be divided to have the fertilizer option.

GASPARDO DISTRIBUTOR

It distributes seed and fertilizer of different shapes and sizes, even in large quantities (theoretically max 350 kg/ha seed and 550 kg/ha fertilizer) in relation to sowing width and operating speeds.

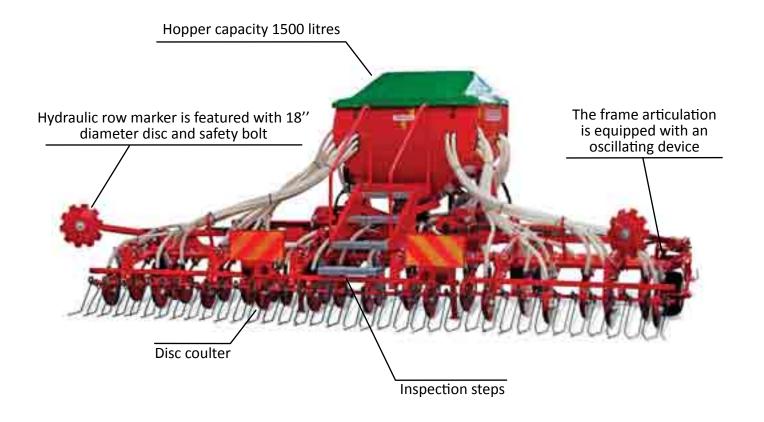

BY-PASS SYSTEM

The patented by-pass system guarantees distribution uniformity, even in very difficult conditions such as sowing on a hill or distributing great volumes of heavy seeds, for example when sowing rice.

Independent

PRIMAVERA

The PRIMAVERA model is ideal for planting on minimum tillage terrains. It features a folding frame and pneumatic distribution, which guarantees optimum results even on hillsides and with different types of seed. Long autonomy, sturdy construction and all-purpose use are the features of the PRIMAVERA model.

Large air drills

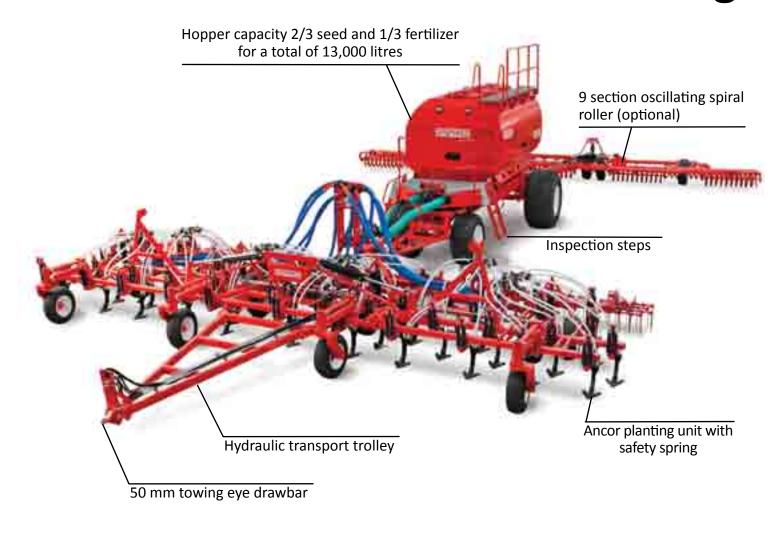

SUPER DUTY FRAME

The floating frame with fitted nitrogen accumulators allow to follow soil contours distributing the weight evenly on all seeding units.

AIR CART

The air cart is strong built and characterized by a reliable mechanical seed transmission.

BALENA

BALENA is a versatile air drill designed to match the requirements of the biggest farms. Thanks to its large working width and large capacity of the cart this drill has superlative operational capabilities. The special tines allow to cultivate the ground and bury seed and fertilizer. The single pass operation is guaranteed to minimize operation costs, save time and fuel. The GPS driving control system enhances working performance preventing overlapping and waste of seed and fertilizer.

Combined seed drills

ALL UNDER CONTROL

ISOBUS technology comes as standard on CORONA and CORSARO allowing to save costs, and set-up time. ISOBUS is a prerequisite for functional documentation of work and for precision farming.

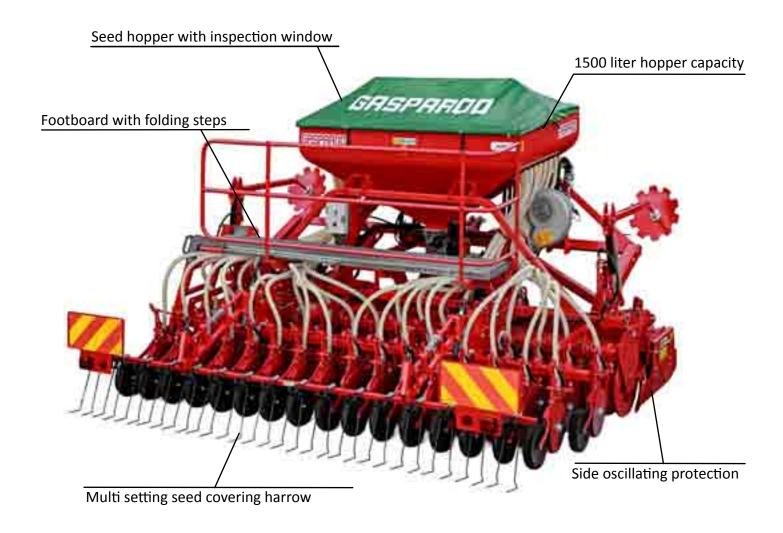

MAINTENANCE-FREE & FINE TILLAGE!

Hard boron steel discs with a diameter of 22" and thickness of 5 mm produce a finely crumbled soil across the whole machine. Two easily adjustable side discs positioned on the front and rear gangs control soil-straw flow providing perfect soil retention and optimal seed bed refinement. Each disc is individually suspended and dampened by 4 rubber elements. The rubber torsion prevents frame and hub damages when obstacle collision occurs.

Till and drill

ALITALIA

The ALITALIA combined seed drill is available in different working widths from 3 to 4 meters. This is a professional model designed for contractors and large-sized farms. The particular configuration of ALITALIA, with the seed hopper right over the roller, leaves the power harrow maximum freedom to oscillate, thus minimum stress and wear even on the toughest soils. The Gaspardo electric driven distributor, controlled by the GENIUS system, enables the machine to quickly adapt to different seeds with just a few fast and simple adjustments from the driver's seat.

Green maintenance

The Maschio Gaspardo green maintenance range is diverse so that it can offer solutions for various applications. Common to all models of the range are basic building principals, like: robust frames, high performance, guaranteed reliability of certified quality mechanical components, and respect towards the current legislation regarding work safety.

Mulchers

up to 60 hp

EASY TO HANDLE

The 3 point hitch equipped with a floating connection follows the ground profile constantly maintaining the same cutting height. The side movement is adjustable thanks to a pin system or a hydraulic system.

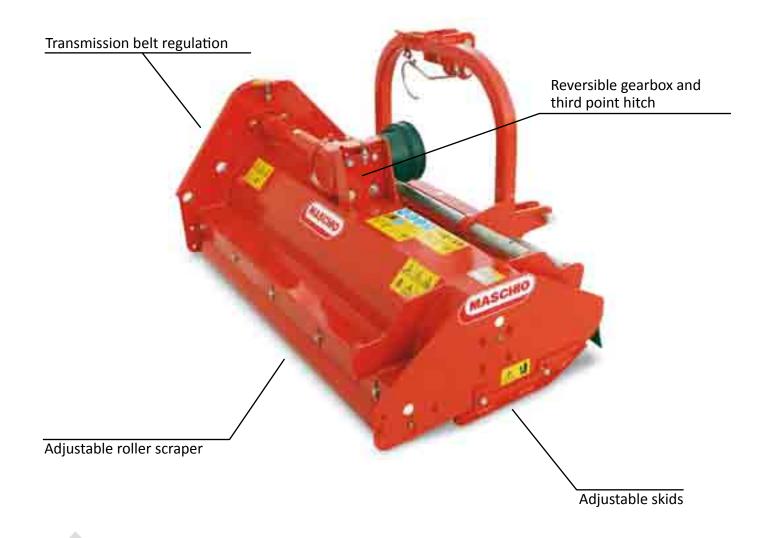

CUSTOMIZE

All models are available with blades for different uses, shafts and Y blades are optional. The high number of blades and their arrangement always assures a uniforme cut and reduces tractor efforts.

Light and strong

FURBA

The FURBA model is designed for those seeking a compact and versatile machine: besides being moved with a mechanical or hydraulic system, it is also reversible. It can be applied to the rear of tractors with PTO at 540 rpm and to the front with PTO at 1000 rpm. This model is suitable for grass cutting and park and garden maintenance, combining the benefits of a movable structure with a light and solid machine.

Mulchers up to 200 hp

FINER MULCHING

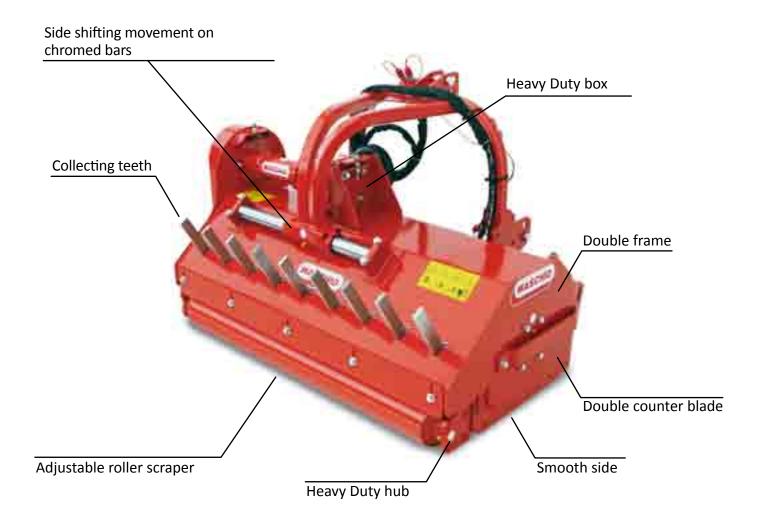

Internal lower counter blades ensure that the discharged material is mulched into fine pieces. The upper counter blade kits are available as an extra optional for a finer mulching of harder coarser materials.

VERSATILITY

The hydraulic offset flail mower comes as standard with hydraulically adjusted side and incline offset. It applies a hydraulic system to allow the machine to work either directly behind the tractor or to the side enabling the user to reach far beyond the profile of the tractor and the ability to work on vertical (+90°) or steep sloping surfaces (-65°).

Clean cut

VITA

The VITA model is suitable for working in vineyards with a narrow planting layout. The shaped side with no protruding components, compact frame and the moving system on two chromed rods allow operations to be carried out in small areas, thereby preventing damage to the machine and the crops. The two notched counterblades together with the robust structure allow optimum shredding of wood residue in one passing.

Straw choppers

LOW VIBRATIONS

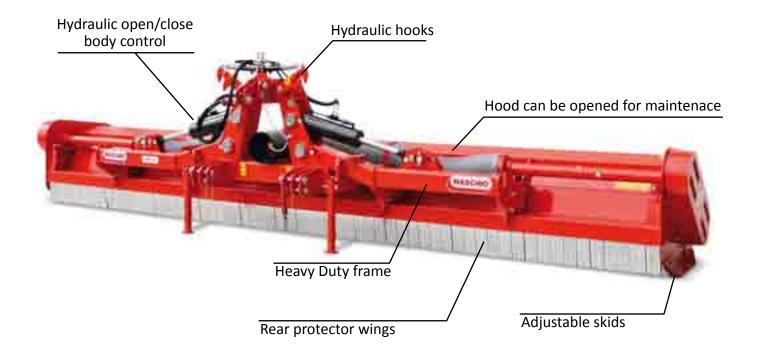

Maschio mulcher rotors are electronically balanced in order to ensure high rotations without vibrations even with high amount of tough residues.

REAR WHEELS

To maintain a regular cutting height rear pivoting wheels are available. The wheels have a multiple regulation and stop system to avoid damages during transport.

Superb

GEMELLA

GEMELLA is a straw mulcher with a folding frame, it's a blend of robustness and safety. Thanks to the large cutting chamber, the robust rotor with a spiral blade layout and the notched counterblade that can separate the most rugged residues, the cutting system guarantees excellent performance on tougher sub-layers. Even when moisture levels are high the materials get discharged thanks to the special shape of the frame. The hydraulic closure with automatic safety hooks allows it to be transported safety and easily on the road.

Hedge cutters up to 70 hp

REVERSIBLE CUTTING HEAD

It's possible to invert the rotation direction: this function allows the machine to adapt to grass and shrub cutting (clockwise) but also to work alongside waterways (counter clockwise).

CUTTING HEAD

The cutting head is very versatile thanks to its 246° articulation; the rotor balancer reduces to a minimum any vibration. Branch and hedge cutting bars available.

Rear mounted

CRISTINA

CRISTINA is a land-clearing machine for agricultural use. Suitable for cutting grass and shrubs in banks and ditches. The compact nature of the arm enables cutting close to the wheel without obstructing the opposite carriageway. It is equipped with a high-performance cast iron pump and engine.

SAFETY

In case of sudden rotor arrest, a safety valve drops pressure from hydraulic engine to prevent any damage. A double safety system is active when the arm encounters any obstacle. First protection is a nitrogen dampener working with a hydropneumatic circuit. If first system is not sufficient a max safety valve, acting on a cylinder, turns back 90° the arm.

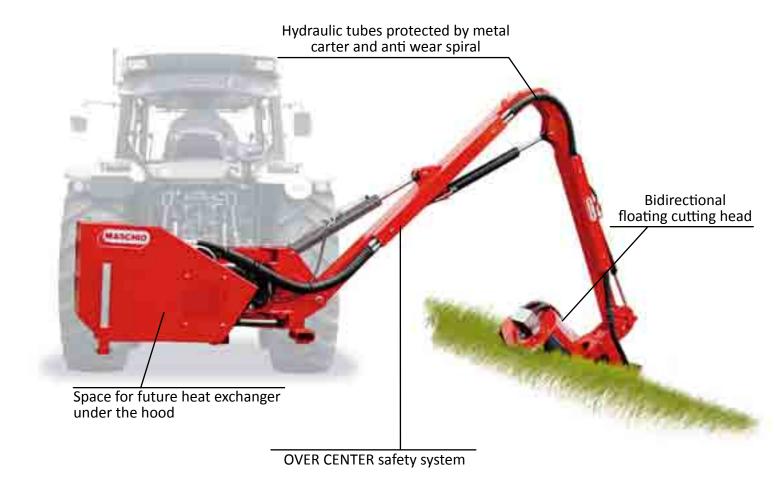

TUBES

Anti-wear and anti outbreak hydraulic tubes protected by spiral carter.

Factotum

PALMA

PALMA is a semi-professional cutting machine arm with a double safety system. Suited for agriculture use, green maintenance roadsides. Also available with a 130 cm cutting head and rotor with hammers. The possibility to combine it with heads such as the branch cutting and hedge bar, both measuring 2 m, makes this machine an efficient tool suitable for all uses.

Lawn mowers

REVERSIBLE CONNECTION

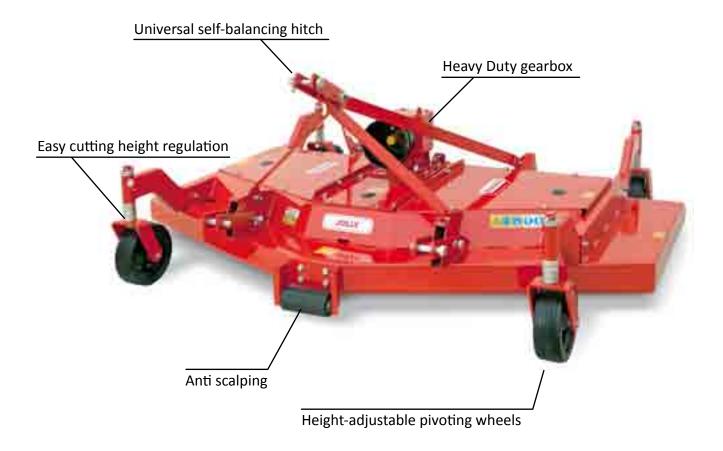

JOLLY, thanks to the reversible tre point hitch, can be used either at the front or at the back of the tractor. It can also be connected to tractor that have a reversible drive.

CUT LENGTH REGULATION

It's easy to precisely adjust the height of the cut grass by just simply regulating the pivoting wheels which can also swerve without causing damages to the frame.

Back & front

JOLLY 210

Ideal for maintaining gardens, sports grounds, parks and public areas. Combined with a farm tractor or garden tractor it becomes a very versatile tool with a high productivity rate. The fast rotation speed of the 3 blades guarantees to cut through even tall grass.

Finger-blade mowers

ANTI-VIBRATION

Kinematics with anti-vibrating rods which, absorbe all vibrations and irregular movements, extend the life of rods and blades granting the entire macchine high performance at low costs.

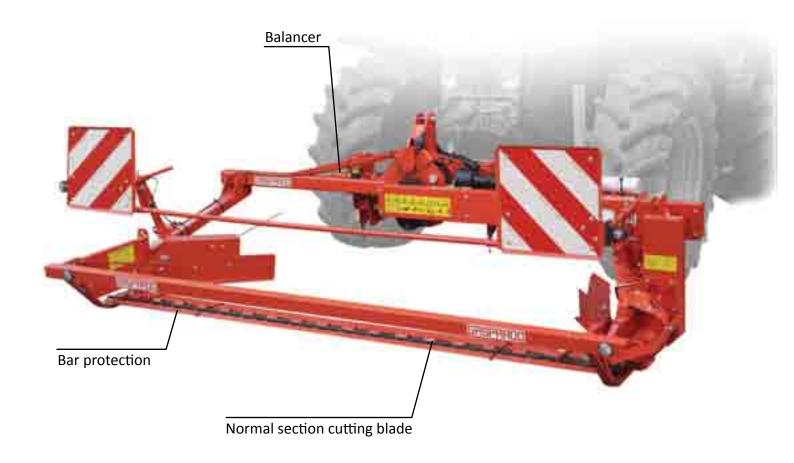

SAFETY

In case of accidental impacts while mowing the blade has an automatic safety system which makes it retract so it doesn't get damaged. A simple reconnection system allows to resume operations.

In front

FRANCA

Franca is a mower especially indicated for cutting fields on mountainous slopes. The swaying hitch makes it adaptable to the ground guaranteeing an even cut on any type of slope. It's also possible to combine a rear mower to widen the worked width optimizing production time. Equipped with the Anti-Vibration system.
